Kunal Swami

Product Management | Product Strategy & Analytics

kunalswamirankawat@gmail.com | +91 9024685944 | LinkedIn

PROFESSIONAL SUMMARY

Product Analyst with 2+ years of experience driving product discovery, experimentation, and growth initiatives across consumer tech. Drove problem discovery and co-shaped product requirements for PW Talk's scenario-based AI roleplay redesign, while leading subscription pricing A/B experiments and retention initiatives. Experienced in translating funnel insights into actionable feature requirements, defining success metrics, and collaborating with PMs, Design, and Engineering through launch. Skilled in SQL, Python, A/B testing, RICE prioritization, and user journey optimization to drive monetization and reduce churn. Backed by product case studies on Ola and Zomato covering 0-to-1 strategy, RICE prioritization, experimentation and metric design.

EDUCATION

Bachelor of Technology (**B. Tech**) — Netaji Subhash University of Technology (**NSUT), New Delhi** (2020-2024)

EXPERIENCE

Product Analyst • Physics Wallah, Gurgaon (May 2025 – Aug 2026)

- **Product Discovery & Strategy:** Identified an unmet need in Riva's open-ended speaking experience despite ~60% of tracked interaction time; diagnosed an expectation gap and prioritized guided, goal-based practice.
- **Monetization & Experimentation:** Designed and executed a subscription pricing A/B test (Rs 199 to Rs 249). Tracked guardrail metrics and presented go-to-market rollout plans, successfully unlocking a 5-6% revenue lift.
- **Product Strategy & Execution:** Partnered with the Product Manager on the scenario-based roleplay redesign—driving problem discovery through funnel analysis, co-shaping feature requirements and success metrics for the PRD, and collaborating with Design and Engineering through launch to reduce subscription churn by 10%.
- **Engagement Risk Detection & Retention:** Used funnel analysis to detect early member dissatisfaction—identifying that 68–70% of cancellations occurred within 15 minutes—and defined product requirements for automated next-best-action reactivation journeys, boosting revenue and CLV.
- **Cross-Functional & Agile Delivery:** Acted as product liaison for an engineering pod, managing sprint cycles, backlog grooming, and user story creation to align technical execution with quarterly product goals.
- **Roadmap & Execution:** Conducted user research and competitive teardowns to identify engagement gaps. Defined 50+ core KPIs, collaborating with engineering and stakeholders to translate data into quarterly product roadmaps and feature prioritization.

Data Analyst • Hindustan Times, New Delhi (Aug 2024 – Apr 2025)

- **Growth & GTM Strategy:** Directed Go-to-Market targeting by analysing user segmentation and conversion funnels for 35,000+ users. Identified high-performing segments that improved lead-generation efficiency by 18%.
- **Operational Scalability:** Deployed automated infrastructure solutions to eliminate 3 hours of daily manual overhead, significantly improving cross-functional alignment, data visibility, and operational efficiency.
- **Performance analytics:** Built cross-functional dashboards and analysed audience segments, conversion, and campaign performance to identify high-performing segments and content categories, improving targeting and data-driven decisions.

PRODUCT CASE STUDIES

Zomato Product Teardown: Improving Group Ordering Through Prioritization, Experimentation & Metrics

- **User Journey Analysis & Problem Discovery:** Analysed Zomato's end-to-end ordering journey to identify decision-making and group-ordering friction across discovery, cart, checkout and post-order stages.
- **Prioritization & Solution Design:** Prioritized six product opportunities using the RICE framework and proposed two solutions: a multi-restaurant cart and integrated bill splitting.
- **Experimentation & Success Metrics:** Developed an A/B testing framework and metric hierarchy covering successful orders, cart conversion, items per cart, payment errors, cancellations and delivery guardrails.

Ola Daily: 2035 Commute Product Strategy

- **Product Vision & Problem Definition:** Defined a 0-to-1 product for urban two-wheeler commuters: a monthly multimodal pass with a guaranteed shuttle seat and an automatic backup ride, built around a target persona and an assumption-based 190M addressable segment.
- **Competitive Analysis & Decision-Making: Evaluated** six solution options on cost, scalability, reliability, operational control and regulatory risk, and chose a pre-committed-demand shuttle pass. Analysed Uber Shuttle's India exit (low ridership, permits, no fallback) to design against each failure.
- **Metrics, Unit Economics & Go-to-Market:** Defined a north star metric (Daily On-Time Commuters) with five driver metrics, guardrails and stop rules. Built a unit-economics check (Rs 38 cost vs Rs 56 revenue per seat-trip, 54-trip break-even) and a phased 2027-35 rollout starting with employer-led pilots.

SKILLS:

- **Product Management & Execution:** Product Discovery, PRDs, Roadmap Planning, User Stories, RICE Prioritization, Agile/Scrum, Go-to-Market Strategy, Stakeholder Management, User Research.
- **Product Analytics & Growth:** A/B Testing, Hypothesis Testing, Funnel & Cohort Analysis, Retention & Churn Analysis, Engagement Metrics (DAU/WAU/MAU), Metric Hierarchies, Primary & Guardrail Metrics, Monetization Strategy, User Segmentation.
- **Product & BI Tools:** Jira, Figma, MoEngage, AppsFlyer, Power BI, Metabase.
- **Data Analysis:** SQL (CTEs, Joins, Window Functions, Subqueries, Query Optimization), Python, Excel, Google Sheets.
- **AI Product Exposure:** LLM Product Workflows, Prompt Design, Evaluation Metrics for AI Conversation Features
